

Who made the journey across the Bering Land Bridge in the late Ice Age?

Create a timeline of the prehistory of the American continent. Include details of species, climate, and geologic change.

Prehistoric horned rodent (*Epigaulus* sp.), artwork. This animal was found in the North American Great Basin during the Miocene, 23.8 to 5.3 million years ago.

What do you think he ate? First brainstorm and write notes about the ecosystem that might have existed during the Miocene. Then create a speculative food web for them.
